

# DATA ANALYTICS ASSIGNMENT QUESTIONS

## DAY - 32:

**1) Explain how conditional statements (If, Elseif, Else) are used in a stored procedure.**

**2) How are loops and exception handling implemented in a stored procedure?**

**3) How is a cursor handled in a stored procedure, and what are the advantages of using stored procedures?**

**4) What is the primary purpose of using a cursor in a database?**

- A) To improve query performance
- B) To iterate through a result set one row at a time
- C) To establish foreign key relationships
- D) To enforce data integrity constraints
