DATA ANALYTICS ASSIGNMENT QUESTIONS

DAY - 47:

1) Explain the core concepts of Power BI, including the difference between Power BI and Power BI Pro. Additionally, provide step-by-step instructions on how to install Power BI Desktop.

2) Explain the process of connecting to a Software as a Service (SaaS) solution in Microsoft Power BI. Additionally, outline the steps to connect to Excel data that can be refreshed.

3) Demonstrate how to upload a local CSV file into Power BI Desktop and explain the advantages of using Power BI for CSV data compared to traditional spreadsheet applications.

4) In Tableau, how can you connect to Excel data for analysis?

    a) By typing the data manually into Tableau worksheets.

    b) By importing data from a CSV file only.

    c) By connecting directly to Excel files (.xlsx) or other data sources.

    d) By copying and pasting data from Excel into Tableau.
