

DATA ANALYTICS ASSIGNMENT QUESTIONS

DAY - 49:

- 1) Provide an overview of different types of visualizations available in Power BI. Explain the significance of selecting the right visualization type based on the nature of the data.

- 2) Demonstrate the process of using existing visualizations in Power BI Desktop and creating a new report with visualizations. Include steps for adding data, selecting visualizations, and configuring properties.

- 3) Explain the importance of formatting visualizations for better presentation. Provide examples of formatting options available in Power BI and how they contribute to the overall aesthetics of the report.

- 4) What is the primary purpose of the "Show Me" menu in Tableau?
 - a) To access Tableau's user interface settings.
 - b) To create and switch between different visualization types.
 - c) To export visualizations to external files.
 - d) To connect to data sources.
