An effective model for **planning**, **organizing** and making **decisions**

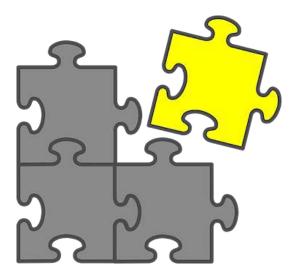

A two-dimensional chart that consists of four equal-sized quadrants

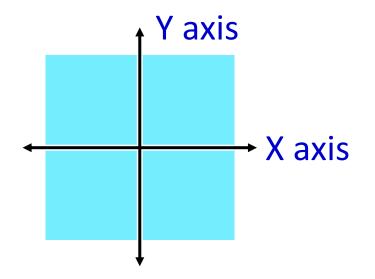

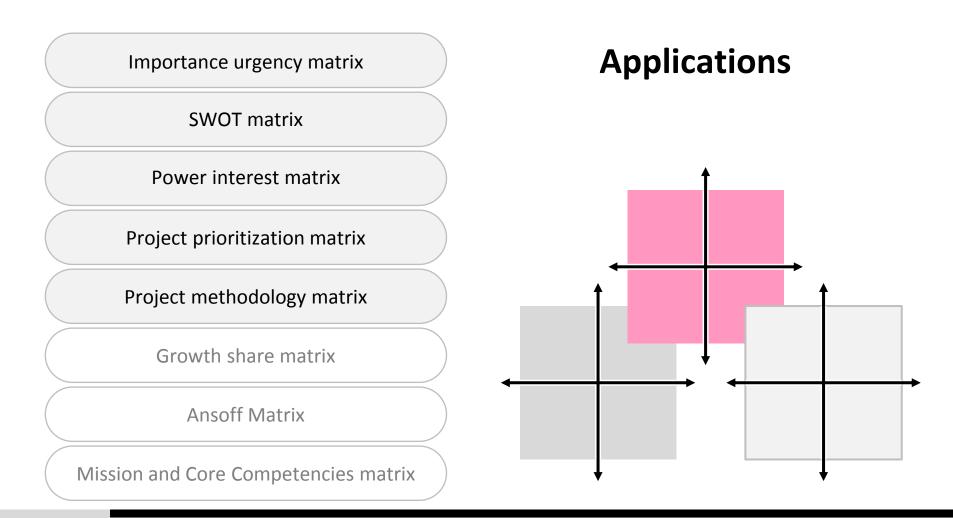

Each describes different aspects of information

Helps you organize your ideas and information in **a logical manner** that makes sense

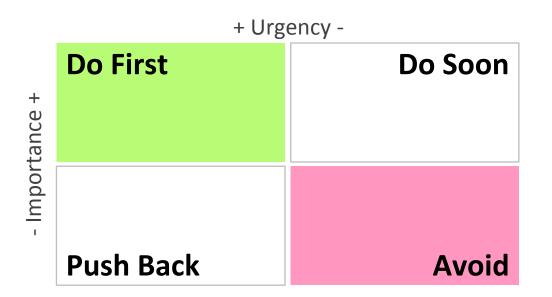

Complex problems can be broken down into easier to handle groups by considering the **two most important characteristics (represented on the X and Y axes)**

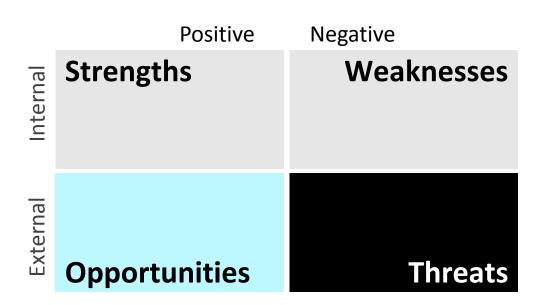

Importance Urgency Matrix / Eisenhower Matrix

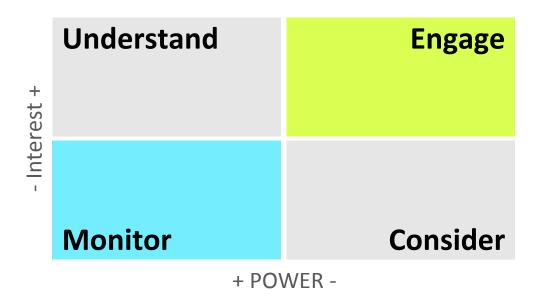

Prioritizes work and personal activities

SWOT Matrix

Evaluates the strategic position of an organization

Power Interest Matrix

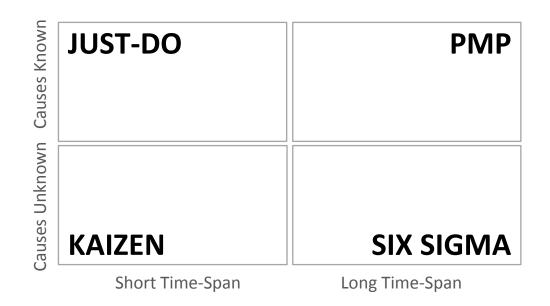

Classifies **stakeholders** according to the power they hold and how likely they are to be interested in a project

Project Prioritization Matrix

Helps **selecting the projects** that will have the greatest impact with the least amount of money, time or effort

Project Methodology Matrix

Select the **methodology** for problem solving and process improvement

How to Construct the Matrix

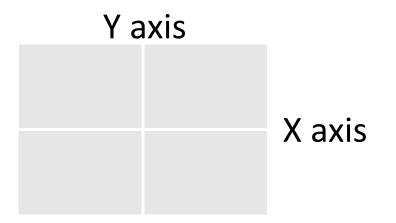

Think about and decide what you really want

Determine the **type of matrix** appropriate for your situation

How to Construct the Matrix

Determine the two most important **characteristics** to place on the X and Y axes

How to Construct the Matrix

Draw the matrix and identify the **four quadrants**

Sort your ideas and information in the appropriate quadrants of the matrix
